

LogCerts

Module Overview

Application Modules — Functional Descriptions

Core Tracking

Dashboard	Personalised home screen showing certificate status at a glance, valid/expiring/expired counts, upcoming expirations, and quick actions. Entry point with summary tiles and shortcuts to every module.
Certificates	Digital vault for STCW, GWO and professional certificates. Track issue and expiry dates, attach scans, sort with custom drag-and-drop order, swipe to delete, and receive automatic expiration warnings.
Calendar View	Visual month-by-month calendar of all certificate expiry dates. Spot clusters of upcoming renewals, filter by status, and tap any date to jump straight to the related certificate.
Reminders	Per-certificate and global reminder lead times (e.g. 90/30/14/7 days). Combine with quiet hours and channel preferences to never miss a renewal deadline.

Capture & Export

Scan	In-app document scanner with edge detection, torch toggle for low light, and manual cropping. Captures certificates with the camera, ready for OCR processing.
Upload	Upload existing photos or PDFs from device storage. A manual cropping step before OCR ensures only the relevant region is processed.
OCR Extraction	AI-powered field extraction for certificates. Auto-fills certificate name, issuing authority, certificate number, issue and expiry dates — with a review step before saving.
Export	Branded CSV, XLSX and PDF reports of your certificates. Includes export timestamp and a 15-second timeout safeguard so the spinner is never stuck.

Account & Notifications

Profile	Personal account management with editable details, password change, language selection, theme switching (light/dark), and subscription status.
Notifications	Multi-channel reminder system covering in-app, email, and push. Configure global lead times or per-certificate overrides. Bell icon shows unread count.
